(54) Title: CONNECTOR ARRANGEMENT FOR A COMMUNICATION TERMINAL

(57) Abstract: A radio communication terminal (40), comprising a user input and output interface (18, 19), data processing means for controlling terminal functions, and a releasable cover (30). Said terminal comprises a terminal core (1) including the data processing means and a cover connector (17) connected to the data processing means, wherein said cover carries an auxiliary functional member (32) and a terminal connector connected to the auxiliary functional member. Said cover connector and terminal connector are devised to provide communicative connection for the auxiliary functional member of an attached cover to the data processing means of the terminal core, thereby affecting or adding to a function of the terminal core.
